6th LARAM WORKSHOP 2011

"SafeLand (EU FP7 Project)"
Living with landslide risk in Europe / Vivere con il rischio da frana in Europa

7-9 September 2011
Palazzo S. Agostino - Via Roma, 104 - Salerno (Italy)
http://www.laram.unisa.it/workshop/2011/2011

Important date / Data importante: 5 September 2011 deadline for registration

Registration Fee / Quota di iscrizione: 150 € (2.5 days)

Info & Registration: http://www.laram.unisa.it/workshop/2011/2011

(Simultaneous translation Italian-English / Traduzione simultanea Inglese-Italiano)

SafeLand is a large-scale integrating collaborative research project funded by the 7th Framework Programme for research and technological development (FP7) of the European Commission. Thematically the project belongs to Cooperation Theme 6 Environment (including climate change), Sub-Activity 6.1.3 Natural Hazards. The project team is composed of 25 institutions from 13 European countries and coordinated by Norwegian Geotechnical Institute (NGI). SafeLand is developing generic quantitative risk assessment and management tools and strategies for landslides at local, regional, European and societal scales. SafeLand establishes the baseline for the risk associated with landslides in Europe, to improve our ability to forecast landslide hazard and detect hazard and risk zones.

The scientific work packages in SafeLand are organised in five Areas:

- **Area 1 "Improving knowledge on landslide hazard, especially the triggering and run-out model" /** "L'avanzamento delle conoscenze sulla pericolosità da frana, modellazione delle fasi di innesco ed evoluzione" focuses on improving the knowledge on triggering mechanisms, processes and thresholds, including climate-related and anthropogenic triggers, and on run-out models in landslide hazard assessment;
- **Area 2 "Quantitative risk assessment (QRA)"** / "Valutazione quantitativa del rischio da frana" harmonises quantitative risk assessment methodologies for different spatial scales, looking into uncertainties, vulnerability, landslide susceptibility, landslide frequency, and identifying hotspots in Europe with higher landslide hazard and risk;
- **Area 3 "Quantifying global change scenarios (climatic and anthropogenic) and their impact on land-slide hazard and risk in the future"** / "Quantificare i cambiamenti climatici ed antropogenici ed il loro impatto futuro sulla pericolosità e sul rischio da franafocuses" on future climate change scenarios and changes in demography and infrastructure, resulting in the evolution of hazard and risk in Europe at selected hotspots;
- **Area 4 "Development of monitoring technology, especially early warning systems and remote sensing techniques, and applications" /** "Sviluppo ed applicazioni di tecnologie di monitoraggio, con particolare riguardo ai sistemi di allerta ed alle tecniche di telerilevamento" addresses the technical and practical issues related to monitoring and early warning for landslides, and identifies the best technologies available both in the context of hazard assessment and in the context of design of early warning systems;
- **Area 5 "Risk management, including toolbox or appropriate hazard and risk mitigation measures and stakeholder process for risk management" /** "Gestione del rischio, incluso strumenti ed opzioni di mitigazione di pericolosità e rischio e processo di coinvolgimento delle parti interessate" provides a toolbox of risk mitigation strategies and guidelines for choosing the most appropriate risk management strategy.

PROGRAMME of the 6th LARAM WORKSHOP 2011 - "SafeLand (EU FP7 Project)"

Living with landslide risk in Europe / Vivere con il rischio da frana in Europa

7-9 September 2011

Palazzo S. Agostino - Via Roma, 104 - Salerno (Italy)

FIRST DAY - 7 September 2011 (09:00-19:00)

****

Opening Lecture

09:00-10:00 F. Nadim - Introduction to the SAFELAND project / Introduzione al progetto SAFELAND

Work Areas 1 and 2

10:00-11:30 J. Corominas - "Quantitative landslide risk analysis: recent achievements and challenges"
11:30-12.00 Coffee break
12:00-13.30 L. Picarelli - "The behaviour of active landslides and potential effects of expected climatic changes"

Lunch break (13:30-15:00)

Work Areas 1 and 2

15:00-16:30 K. Pitilakis - "From the hazard to the vulnerability assessment and loss estimation for buildings and infrastructures"
16:30-17.00 Coffee break
17:00-19.00 M. Pastor - "Numerical modelling of landslide propagation"

SECOND DAY - 8 September 2011 (09:00-18:30)

****

Work Area 2

09:00-10:00 S. Ferlisi - "Physical vulnerability to fast-moving landslides"

Work Area 3

10:00-11:00 E. Foerster - "Methodology for Climate Change scenarios integration into quantitative hazard assessment at selected sites in Europe"
11:00-11.30 Coffee break
11:30-12:30 E. Forester - cont'ed

Work Area 4

12:30-13:30 N. Casagli - "Innovative monitoring and remote sensing methods and future technology"

Lunch break (13:30-15:00)

Work Area 4

15:00-16:00 N. Casagli - cont'ed
16:00-16.30 Coffee break

Work Area 5

16:30-17:30 G. Sorbino - "The role of control works in the risk mitigation framework"
17:30-18.30 G. Vaciago - "A compendium of mitigation measures, with selected examples"

LARAM School
Università di Salerno - Facoltà di Ingegneria
Dipartimento di Ingegneria Civile (DICIV)
Via Ponte Don Melillo – 84084 Fisciano (SA) – ITALY

PROGRAMME of the 6th LARAM WORKSHOP 2011 - "SafeLand (EU FP7 Project)"

Living with landslide risk in Europe / Vivere con il rischio da frana in Europa

7-9 September 2011

Palazzo S. Agostino - Via Roma, 104 - Salerno (Italy)

THIRD DAY - 9 September 2011 (09:00-13:00)

****

Work Area 5

09:00-10:30 L. Cascini / A. Scolobig - "Public participation in landslide risk mitigation decisions"

10:30-11.00 Coffee break

11:00-12:30 L. Cascini / A. Scolobig - Tutorial activity

Final session

12:30-13.00 Concluding remarks / Considerazioni conclusive

LIST OF LECTURERS

- Prof. Nicola Casagli – University of Firenze (ITALY)
- Prof. Leonardo Cascini – University of Salerno (ITALY)
- Prof. Jordi Corominas – Universitat Politècnica de Catalunya, Barcelona (SPAIN)
- Prof. Settimio Ferlisi – University of Salerno (ITALY)
- Dr. Evelyne Foerster – Bureau de recherches géologiques et minières (FRANCE)
- Prof. Farrokh Nadim – International Centre for Geohazards, Oslo (NORWAY)
- Prof. Manuel Pastor – Universidad Politecnica de Madrid (SPAIN)
- Prof. Luciano Picarelli – Seconda University of Napoli (ITALY)
- Prof. Kyriazis Pitilakis – Aristotle University of Thessaloniki (GREECE)
- Dr. Anna Scolobig – International Institute for Applied Systems Analysis, Vienna (AUSTRIA)
- Prof. Giuseppe Sorbino – University of Salerno (ITALY)
- ing. Giovanni Vaciago – Studio Geotecnico Italiano S.r.l., Milano (ITALY)
